

## **LISTING OF THE CLAIMS**

1. (withdrawn) A method for executing a transaction in a computerized system, the transaction based upon an order communicated by a first ordering party, the method comprising:

allowing each of a plurality of parties receiving an order related to the transaction to designate a plurality of other parties with whom to communicate orders relating to the transaction and to communicate orders with such designated other parties using the system;

determining whether a match occurs on an order arising from the order communicated by the first ordering party and on an order communicated by a second ordering party; and

executing the transaction relating to the matched orders at least by executing orders communicated by the first and second ordering parties.

2. (withdrawn) The method of claim 1, wherein the step of allowing parties to communicate orders comprises allowing the first ordering party to communicate orders with a plurality of parties.

3. (withdrawn) The method of claim 2, comprising selecting one of the parties with whom the first ordering party has communicated an order, and wherein the step of executing the transaction comprises executing the transaction between the first ordering party and the selected party.

4. (withdrawn) The method of claim 2, wherein each order has a set of terms, and wherein the step of allowing the first ordering party to communicate orders comprises allowing the first ordering party to communicate orders having different sets of terms to different ones of the parties.

5. (withdrawn) The method of claim 2, wherein each order has a set of terms, and wherein the step of allowing the first ordering party to communicate orders comprises allowing the first ordering party to communicate orders having identical terms to different ones of the parties.

6. (withdrawn) The method of claim 1, comprising allowing the first ordering party to

select whether the order is a live, executable order or a subject order.

7. (withdrawn) The method of claim 1, wherein the order generated by the first ordering party is a live, executable order, and wherein the step of allowing parties to communicate orders comprises allowing parties to communicate live, executable orders.

8. (withdrawn) The method of claim 7, wherein the step of executing the transaction comprises automatically executing the transaction between the parties upon determination of a match if the orders generated by the first and second ordering parties are live, executable orders.

9. (withdrawn) The method of claim 1, wherein the order communicated by the first ordering party is an order subject to satisfaction of a condition, and wherein the step of executing the transaction comprises executing the transaction only if the condition is satisfied.

10. (withdrawn) The method of claim 1, wherein the computerized system comprises a system for trading financial instruments, and wherein the step of allowing parties to communicate orders comprises allowing parties to communicate offers or bids for the financial instruments.

11. (withdrawn) The method of claim 1, wherein the computerized system comprises a system for trading items in specified amounts, the method comprising allowing the first ordering party to specify an amount of items to be in the order communicated to other parties.

12. (withdrawn) The method of claim 11, comprising allowing the first ordering party to select whether all the specified items in the order must be part of the transaction.

13. (withdrawn) The method of claim 1, comprising, for each of the plurality of parties using the system, storing in a memory accessible to the party a list of other parties and allowing the party to select one or more of the other parties in the list with whom to communicate the order.

14. (withdrawn) The method of claim 1, comprising, for each of the plurality of parties using the system, storing a set of rules in a memory accessible to the party, and wherein the step of allowing parties to communicate orders comprises generating and communicating orders between parties based upon the stored sets of rules.

15. (withdrawn) The method of claim 1, wherein the order communicated by the first ordering party has a first set of terms, and wherein the step of allowing parties to communicate orders comprises allowing parties to communicate orders having second sets of terms different than the first set of terms.

16. (withdrawn) The method of claim 15, wherein the first set of terms include a price for the transaction, and wherein the step of allowing parties to communicate orders having second sets of terms comprises allowing parties to modify the price from the first set of terms.

17. (withdrawn) A computerized trading system for facilitating execution of a transaction based upon an order communicated by a first ordering party, the system comprising:

a communication system for allowing each of a plurality of parties using the system and receiving an order relating to the transaction to designate a plurality of other parties with whom to communicate an order relating to the transaction and to communicate the order with such selected party or parties;

a matching system for determining whether a match occurs on an order arising from the order communicated by the first ordering party with an order communicated by a second ordering party; and

an order execution system for executing the transaction relating to the matched order at least by executing orders communicated by the first and second ordering parties.

18. (currently amended) A method, comprising:

facilitating execution of a chain of transactions in a computerized system, the chain of transactions being based on a first order communicated by a first ordering party and a second order

~~communicated by a second party, the first order including at least one bid or offer;~~

allowing each of a plurality of intermediate parties using the computerized system to communicate intermediate orders relating to the ~~transaction to one another using the system~~first order or another of the intermediate orders, and allowing a second ordering party using the computerized system to communicate a second order relating to one or more of the intermediate orders, each of the intermediate orders and the second order including at least one offer or bid; and

using the first order, at least one communicated intermediate order, and the second order to identify the chain of transactions to be executed among the first ordering party, at least one intermediate party, and the second ordering party~~identifying at least one chain of at least some of the intermediate parties, the intermediate orders from which if executed would at least partially complete the transaction.~~

19. (previously presented) The method of claim 18, comprising determining whether a match occurs between one of the intermediate orders and at least one of the first and second orders of the first and second ordering parties.

20. (previously presented) The method of claim 19, comprising executing the transaction by matching one or more of the intermediate orders between the first order and the second order and executing the one or more matched orders in the chain.

21. (previously presented) The method of claim 20, comprising allowing the first ordering party to select whether the first order is a live, executable order or a subject order.

22. (previously presented) The method of claim 21, wherein the first order is a live, executable order, and the step of allowing the intermediate parties to communicate intermediate orders comprises allowing the intermediate parties to communicate live, executable intermediate orders.

23. (previously presented) The method of claim 22, comprising executing the transaction by

automatically executing live orders in the chain that are matched.

24. (previously presented) The method of claim 18, wherein the first order communicated by the first ordering party is an order subject to satisfaction of a condition, comprising executing the transaction only if the condition is satisfied.

25. (previously presented) The method of claim 18, wherein the computerized system comprises a system for trading financial instruments, and the step of allowing intermediate parties to communicate intermediate orders comprises allowing the intermediate parties to communicate offers or bids for the financial instruments.

26. (withdrawn) The method of claim 18, wherein the computerized system comprises a system for trading items in specified amounts, the method comprising allowing the first ordering party to specify an amount of items to be in the order communicated to other parties.

27. (withdrawn) The method of claim 26, comprising allowing the first ordering party to select whether all the specified items in the order must be part of the transaction.

28. (withdrawn) The method of claim 18, comprising, for each of the plurality of parties using the system, storing in a memory accessible to the party a list of other parties and allowing the party to select one or more of the other parties in the list with whom to communicate the order.

29. (currently amended) The method of claim 18, comprising storing a set of rules for each of at least some of the parties using the system in a memory accessible to such parties, wherein the step of allowing intermediate parties to communicate intermediate orders comprises generating and communicating intermediate orders between intermediate parties based upon the stored sets of rules.

30. (currently amended) The method of claim 18, wherein the first order communicated by the first ordering party has a first set of terms, and the step of allowing intermediate parties to

communicate intermediate orders comprises allowing intermediate parties to communicate intermediate orders having respective second sets of terms different than the first set of terms.

31. (previously presented) The method of claim 30, wherein the first set of terms include a price for the transaction, and the step of allowing intermediate parties to communicate intermediate orders having respective second sets of terms comprises allowing intermediate parties to modify the price from the first set of terms.

32. (previously presented) The method of claim 18, wherein identifying the chain of parties comprises tracking a path of parties tracing back to the first ordering party as each of the parties communicates a respective one of the orders.

33. (previously presented) The method of claim 32, comprising storing a subset of the path of parties in association with each of the orders.

34. (withdrawn) In a computerized system, a method for facilitating execution of a transaction between a first party and a second party through a plurality of intermediaries, the method comprising, for each intermediary involved in the transaction:

- presenting to the intermediary an order received by the intermediary relating to the transaction;

- storing information for identifying a list of other parties in a memory accessible to the intermediary;

- displaying the list to the intermediary;

- allowing the intermediary to select one or more parties from the list to which the intermediary can communicate an order relating to the transaction; and

- communicating the order from the intermediary to the one or more selected parties.

35. (withdrawn) The method of claim 34, comprising allowing the intermediary to generate the list of other parties from among a group of parties using the system.

36. (withdrawn) The method of claim 34, comprising storing status data representing whether each party in the list is an intermediary party which is allowed to communicate an order relating to the transaction to other parties or a counterparty which is not allowed to communicate an order relating to the transaction to other parties, and displaying the status data with the list to the intermediary.

37. (withdrawn) The method of claim 34, wherein the order presented to the intermediary identifies parties with which the intermediary party may communicate orders, and comprising selected the identified parties from the information identifying the list and displaying the identified parties as the list to the intermediary.

38. (withdrawn) The method of claim 34, wherein the order presented to the intermediary contains a first set of terms, the method comprising allowing the intermediary to generate a second set of terms for the order to be communicated with each party.

39. (withdrawn) The method of claim 38, wherein the step of allowing the intermediary to generate a second set of terms comprises allowing the intermediary to generate a different set of terms for each party to whom an order is communicated.

40. (withdrawn) In a computerized system for trading of fixed income securities, a method for facilitating execution of a transaction based upon an order communicated by a first investor, the method comprising:

- presenting an order to a broker dealer arising from the order communicated by the first investor;

- allowing the broker dealer to decide, among other possible choices, whether to match the presented order or communicate an order relating to the transaction to a plurality of other parties using the system;

- if the broker dealer decides to match the presented order, executing the transaction by at

least executing the presented order and the order communicated by the first investor; and

if the broker dealer decides to communicate the order, communicating the order to the one or more other parties.

41. (withdrawn) The method of claim 40, comprising allowing the broker dealer to further decide to submit a counteroffer to the order and communicating the counteroffer.

42. (withdrawn) The method of claim 40, comprising allowing the first investor to select whether the order is a live, executable order or a subject order.

43. (withdrawn) The method of claim 40, wherein the order communicated by the first investor is a live, executable order, and wherein the step of communicating the order from the broker dealer comprises communicating a live, executable order.

44. (withdrawn) The method of claim 43, wherein the step of executing the transaction comprises automatically executing the transaction upon a match between the order communicated by the first investor and a matching live, executable order.

45. (withdrawn) The method of claim 40, wherein the order communicated by the first investor is an order subject to satisfaction of a condition, and wherein the step of executing the transaction comprises executing the transaction only if the condition is satisfied.

46. (currently amended) The method of claim 18, wherein at least one of the first, second, and intermediate orders have parameters set by the parties, and the intermediate parties in the chain cannot be prevented ~~are permitted despite not being determined by parameters set by the first and second ordering parties.~~
